BrightTV Viewership Analytics

CEO Briefing

Project Context

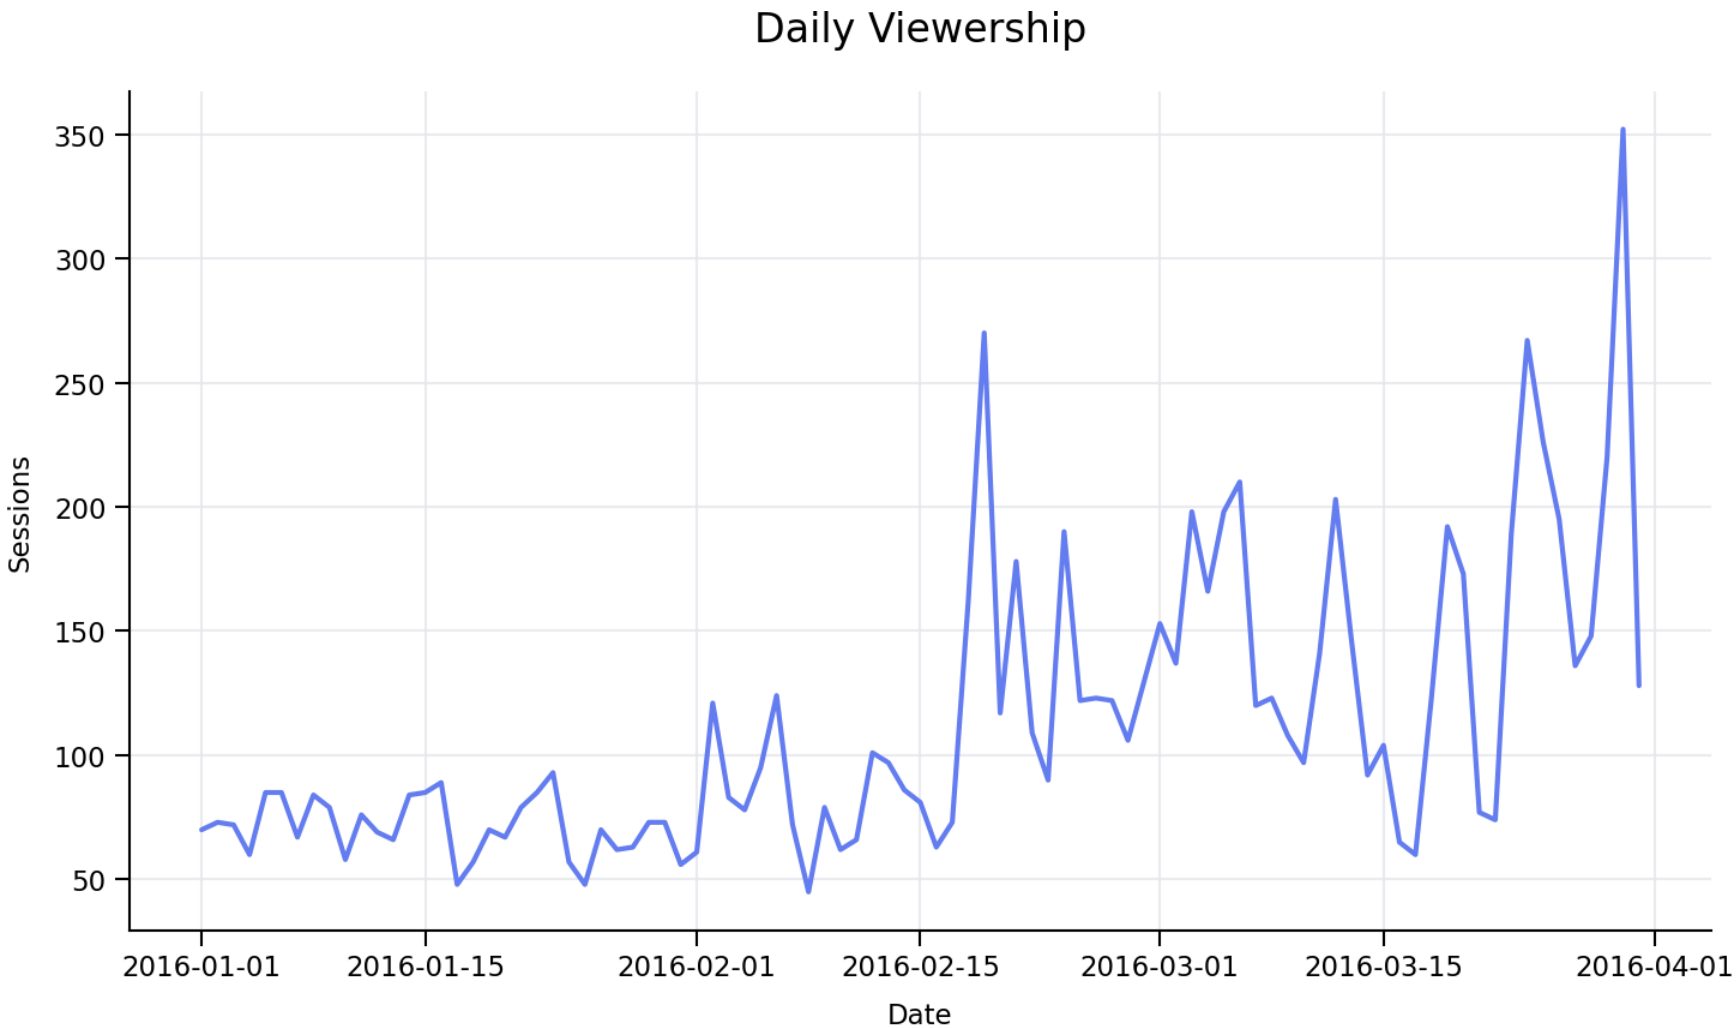
- Objective: Grow BrightTV subscriptions using behavioural insights
- Data analysed at session level with user demographics
- Focus on usage patterns, engagement, and growth levers

Usage Trends – Overview

- User activity fluctuates significantly by day
- Engagement depth varies across users and content
- Strong time-of-day effects observed

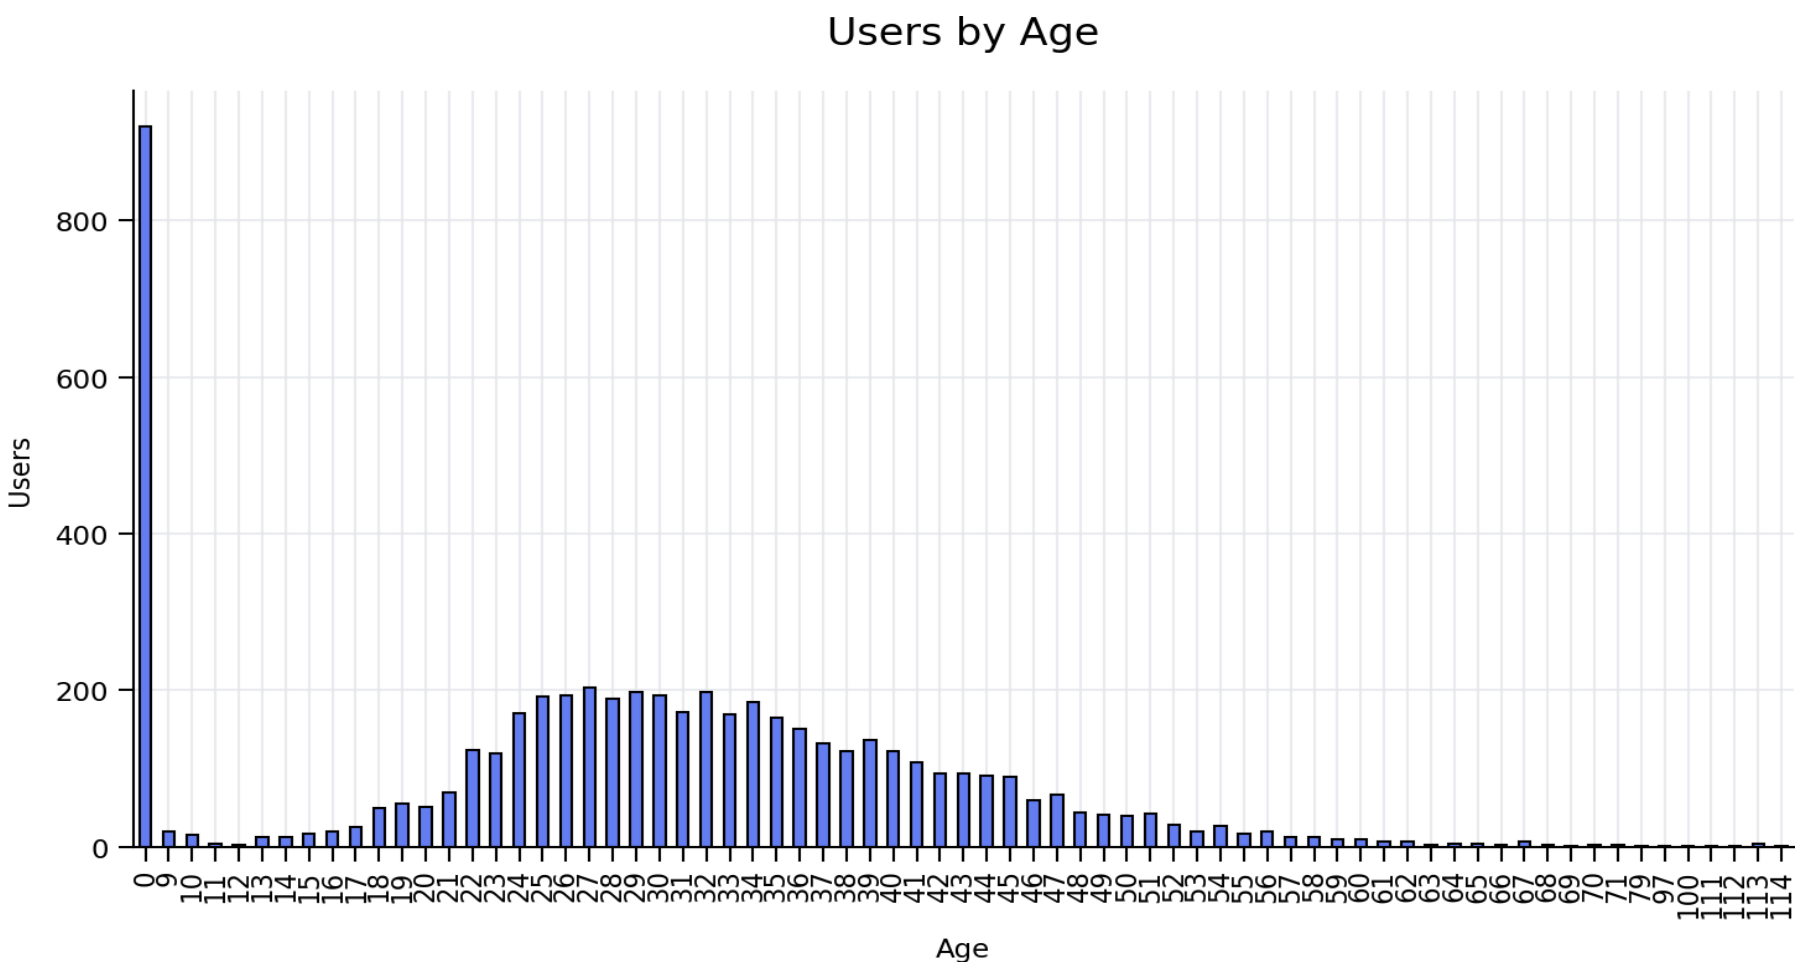
Daily Viewership Trend

Usage varies by day, suggesting non-habitual viewing.



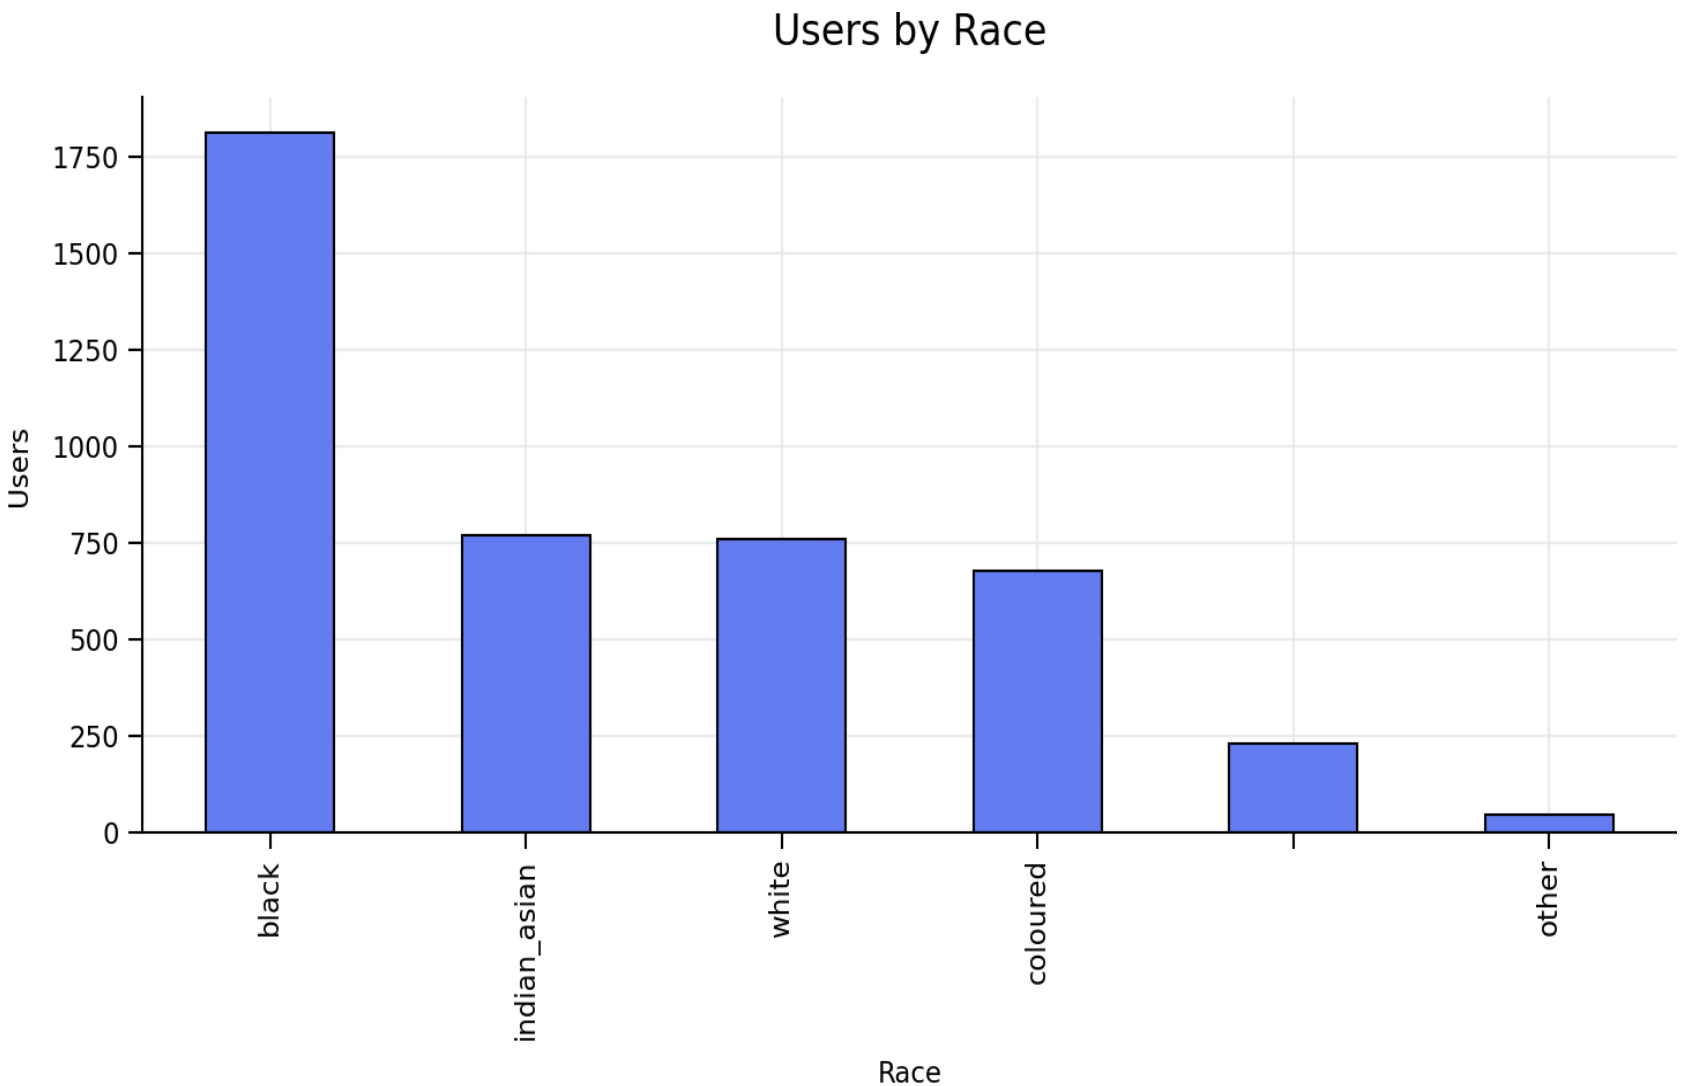
Age Distribution

Audience skews toward mature age groups.



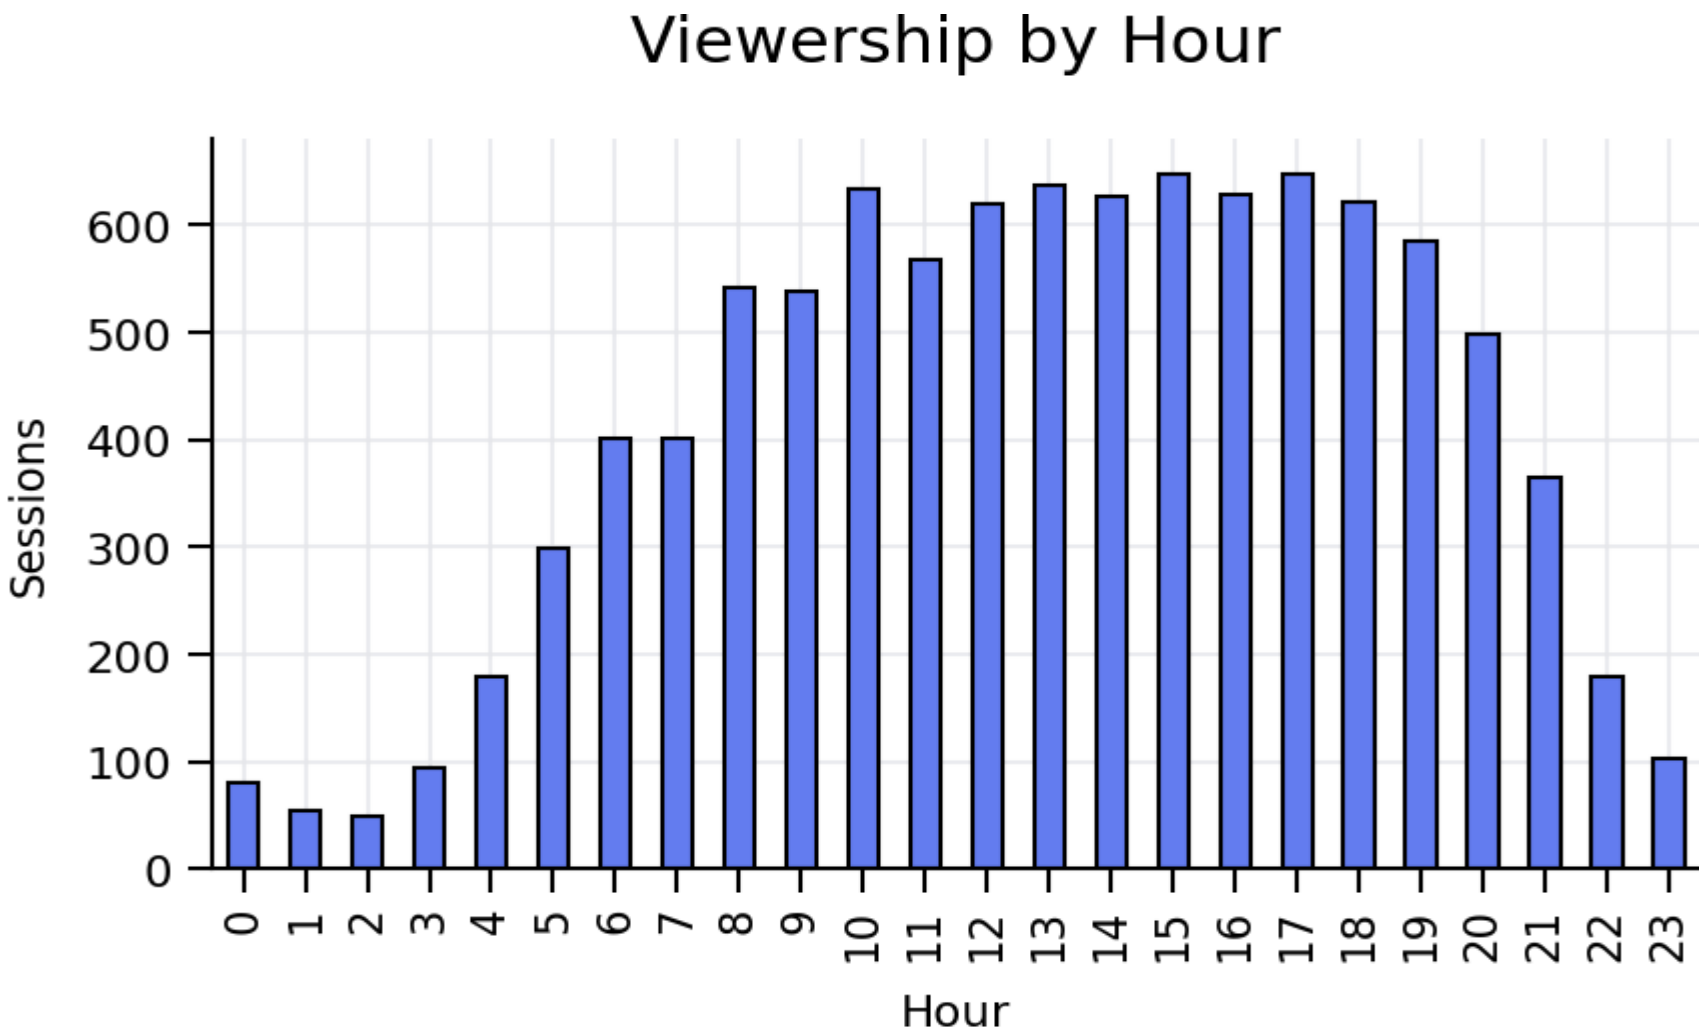
Race Distribution

Broad demographic representation across races.



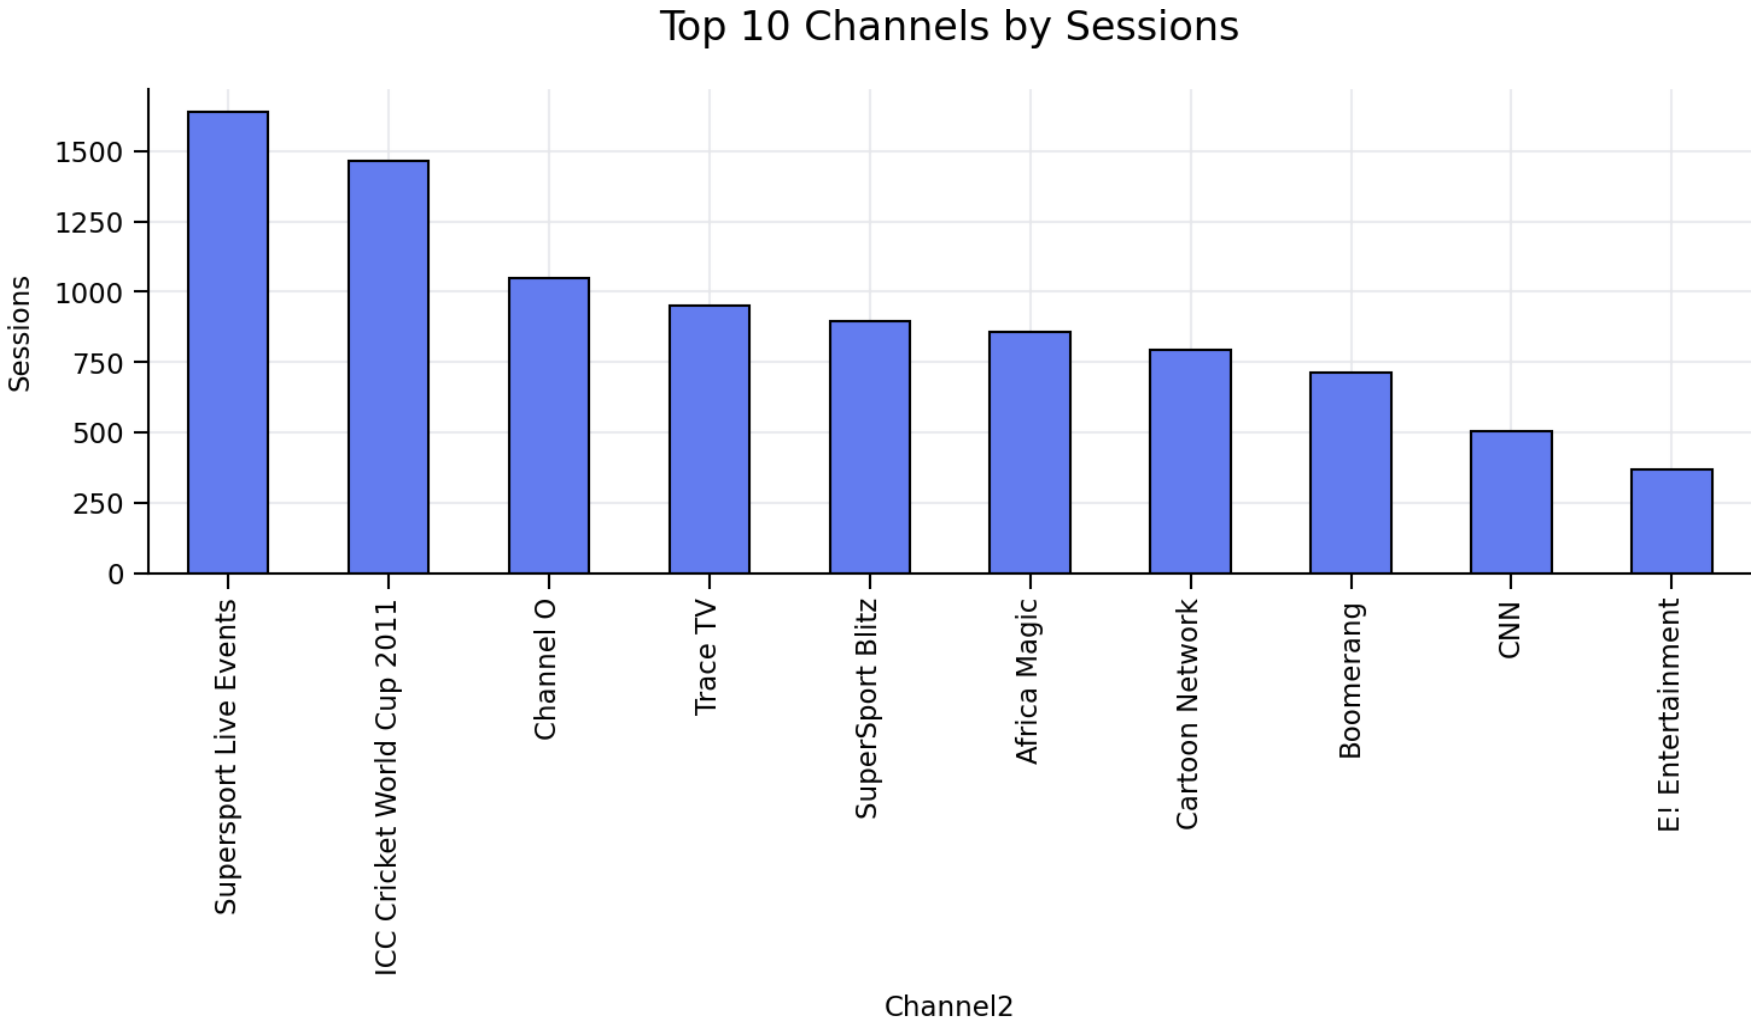
Time of Day Usage

Evening hours dominate consumption.



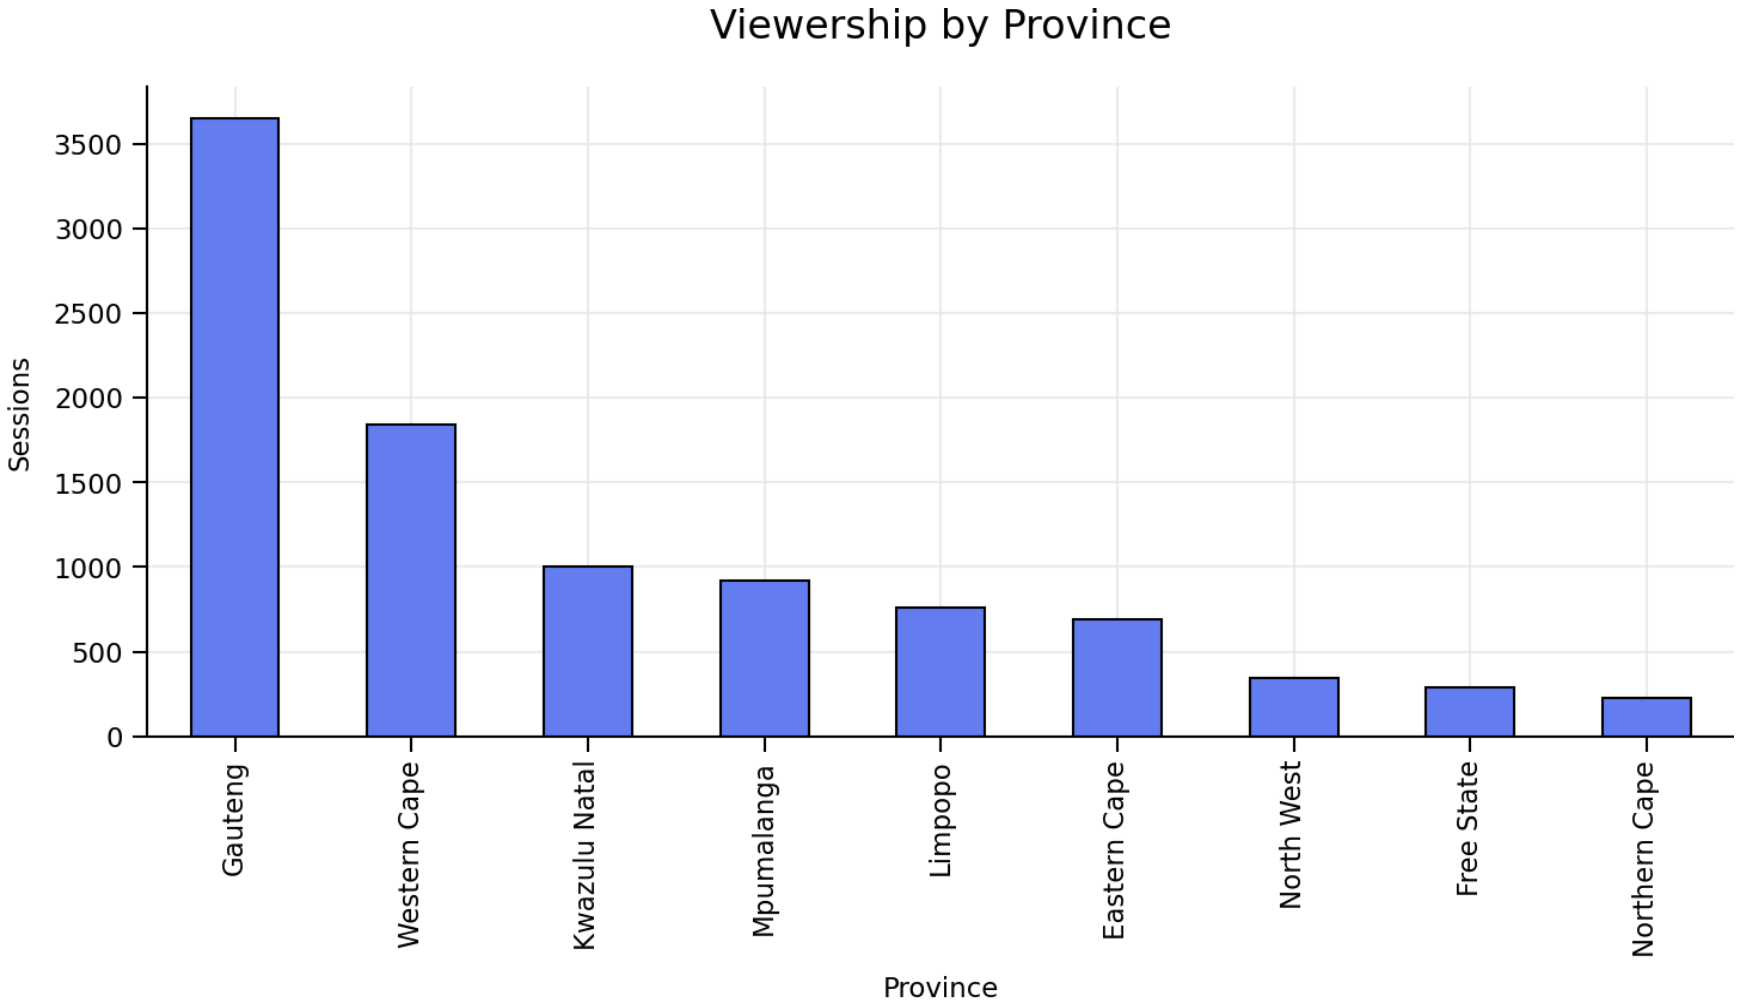
Top 10 Channels

A small number of channels drive most activity.



Usage by Province

Provincial differences indicate targeting opportunities.



Key Analysis

- Engagement is driven more by timing and content than sheer activity
- Some content consistently drives deeper viewing sessions
- Low-usage days show predictable patterns

Recommendations

- Focus on early user engagement to reduce churn
- Promote high-engagement content during low-usage days
- Align campaigns to evening peak hours

Closing Remarks

- Growth opportunity exists within the current user base
- Behavioural insights enable targeted interventions
- Next step: retention experiments and predictive modelling
